Experience

Founding Engineer | Docny Feb 2026 - October 2026

- Built the TipTap documentation editor end to end, connecting the browser interface to save APIs and document persistence for a platform serving 500+ users
- Co-built GitHub-based documentation generation and shipped an embedded AI assistant that answers reader questions using published documentation
- Implemented custom domains, branding, templates, and reader analytics; added integrations with GitHub, Jira, Linear, Slack, Notion, and Algolia

Co-Founder and Backend Engineer | Law Angels June 2025 - Feb 2026

- Built Django REST Framework APIs and PostgreSQL services for authentication, timed mock exams, Stripe checkout, subscription webhooks, and paid-content access
- Co-built an SQE preparation platform serving 1,000+ monthly visitors, with 1,500+ quiz questions, progress tracking, and recurring subscription tiers

Backend Engineering Intern | i4nnova Ltd Jan 2025 - June 2025

- Reduced average issue resolution time by 40% by building an internal Python chatbot that retrieves relevant issue logs through embeddings and Pinecone search

Frontend Developer (Contract) | Dondax October 2023 - Dec 2024

- Built mobile-first product pages, a three-color picker, and a multi-step order form for buyer and delivery details
- Built a rider management application supporting 200+ riders in their day-to-day operations, integrating the frontend with Django APIs and a database for rider tracking and management.

Projects

Axis by Digenty axisbydigenty.com

- Built a school management platform with Java 21, Spring Boot, and Next.js to centralize attendance, admissions, exams, invoices, and parent access
- Implemented MySQL persistence with JPA, versioned schema changes with Flyway, and authentication with Spring Security; packaged the backend with a multi-stage Docker build

Agent Workspace github.com/Posiislight/agent-workspace

- Built a React interface and FastAPI workflow for AI coding, test execution, review, and human approval; streamed task progress through Redis Streams and server-sent events
- Implemented LangGraph workflows with PostgreSQL checkpoints and per-task virtual machines to preserve progress across coding, review, and human-approval stages

Skills

Languages: TypeScript, JavaScript, Python, Java, SQL, HTML, CSS

Frameworks and data: React, Next.js, Django REST Framework, FastAPI, Spring Boot, PostgreSQL, MySQL, Redis

Tools: Git, Docker, AWS, GitHub Actions, Stripe, TipTap

Education and Certification

BSc Software Engineering | Babcock University 2026

AWS Certified Solutions Architect - Associate
